### Note

The separation and orientation of the two elements, head, and body, may vary, as long as the necessary security areas of each element do not conflict. Consult possible alternatives.

## SERIE

C/ Foia, 13 P.I. Alguería de Moret 46210 Picanya (Valencia)

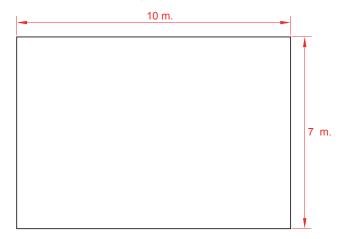

The company reserves the right to perform any modification or change in their products.

Foundation dimensions for a straight distribution of the elements.

For other distributions, consult us.

### Installation.

Screwed to concrete floor using expansion plugs or threaded rod and epoxy. Finished with compacted material coating either continuous wet-pour rubber surfacing or rubber tiles.

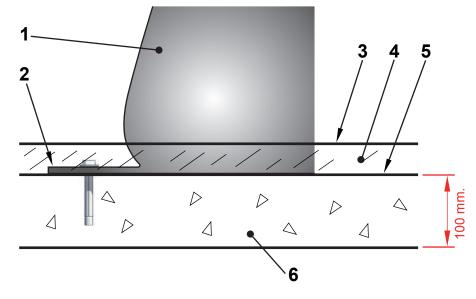

### Maintenance:

Checking: all fixing points, screws and bolts must be periodically checked and tightened again if necessary. The checking date must be annotated in order to establish a control.

### Inspections:

- 1. Routine visual inspection. An eye and functional inspection will be performed to verify that you have not suffered any vandalism damage.
- 2. Functional inspection. This inspection will be carried out with a periodicity of 1 to 3 months and attention should be paid to the components "sealed for life" and the equipment whose stability depends on a post.
- 3. Annual inspection. A complete inspection of the whole set will be carried out in order to verify that it meets all the sections of the standard and that it has not been modified.
